Phusion Onsite

Phusion Onsite is a powerful mobile and web-based software for the collection and inspection of asset information, ulilising the latest mobile technology such as QR / RFID scanners and image capture. It allows field operators and office teams to work together to ensure that your information is up-to-date and accessible.

Correct and connected information increases operational efficiency whilst reducing errors and costs. Phusion Onsite works stand-alone or can integrate with the full Phusion software suite and other leading software systems, so you know you're in safe hands.

Based on configurable architecture, Phusion Onsite can be customised by its users to suit a wide range of different usage scenarios thanks to a straightforward question builder interface.

Phusion Onsite is ideal for:

• Site data collection

• Hazardous area inspections

• Fault recording

• Routine maintenance

• Equipment inspections

• Site surveys

...and so much more

Available on

Configurable questions
Design your own questions for asset data collection, to meet your exact business requirements.

Optimise workflow
Built in logic to collect only the information you need. Dig deeper in specific areas and bypass unnecessary questions.

Seamless integration
Integrate with existing enterprise software and data sets to provide seamless field data management.

Reduce data entry
Feed forward your forms with previously collected information from existing data sets to minimise field data entry and reduce errors.

Ensure data visibility
Web based dashboard provides powerful analytics and an audit trail of all activity. Custom reports can be built using a database reporting engine.

Remote support
View the latest data and images instantly* through the dashboard to provide remote collaboration and support to the user.

Access documents, drawings and images
Give field operators access to related procedures, equipment locations and photos to optimise the time on site and reduce visits back to base.

Complete data management solution
Integrate with additional Phusion software and services to create a tailor made, scalable data management solution.

Utilising mobile hardware
Uses built in image capture, barcode and QR code reader, GPS and NFC**. Available on a wide range of mobile devices including Zone 1.

Image gallery
Images can be captured during collection and re-used to aid equipment or location identification, support instructions and highlight faults for repair work.

* internet connection required for instant data and image upload
** with compatible mobile devices

Collaborative working

Phusion Software Suite

Phusion's software and mobile applications have been developed specifically for Engineering Information Management. Each software application from the Phusion software suite focuses on a specific task in the information management process:

Phusion Onsite:
Collection software allowing users of mobile devices to gather data remotely.

Collect on site

Phusion Collect:
Collect, review and share engineering information through templates.

Collect in house

Phusion Reference:
Manage, edit, compare and reference class libraries, lists, standards and data libraries.

Consistent

Single Source of Truth

Connect

Correct

Phusion Edit Grid:
Secure access to view, insert and delete records for live bulk editing.

Phusion Pick & Link:
Create and view relationships between all kinds of information and documents.
